

The photo to the left shows Ariel installing lamps in a house. Notice the "wall" that divides the house into a living area and a sleeping area. Imagine the risk of fire with candles or gas lamps.

The photo above shows Ariel installing a solar panel.

The photo below shows the November, 2009, Calgary group visiting a home with an LED/solar system and water filter (see photo to right).

The photo to the right shows the Dominican woman who owns the house, speaking to the group about her Biosand water filter and LED lights.
